

Phosphatidylcholine

This ingredient usually called PPC is lipid that transforms fat cell membranes once it is infiltrated into subcutaneous fat, and gives an effect in dissolving neutral fats (In other words, it is effective for a diet).

Phosphatidylcholine called Lecithin eliminates out of the body waste matters clotted around blood vessels, fat mass, bad cholesterol, neutral fat and toxins (This is phospholipid containing egg yolk, bean, sunflower seed and seafood). This ingredient adjusts moisture in cells, which is helpful for luminous skin and lustfulness as well as health.

This is usually extracted in soybean (a sort of bean) that is frequently used for medical food.

Sodium Deoxycholate

This ingredient undertakes a role to help make PPC water-soluble, giving an effect in dissolving fat cells.

Baobab seed Extract

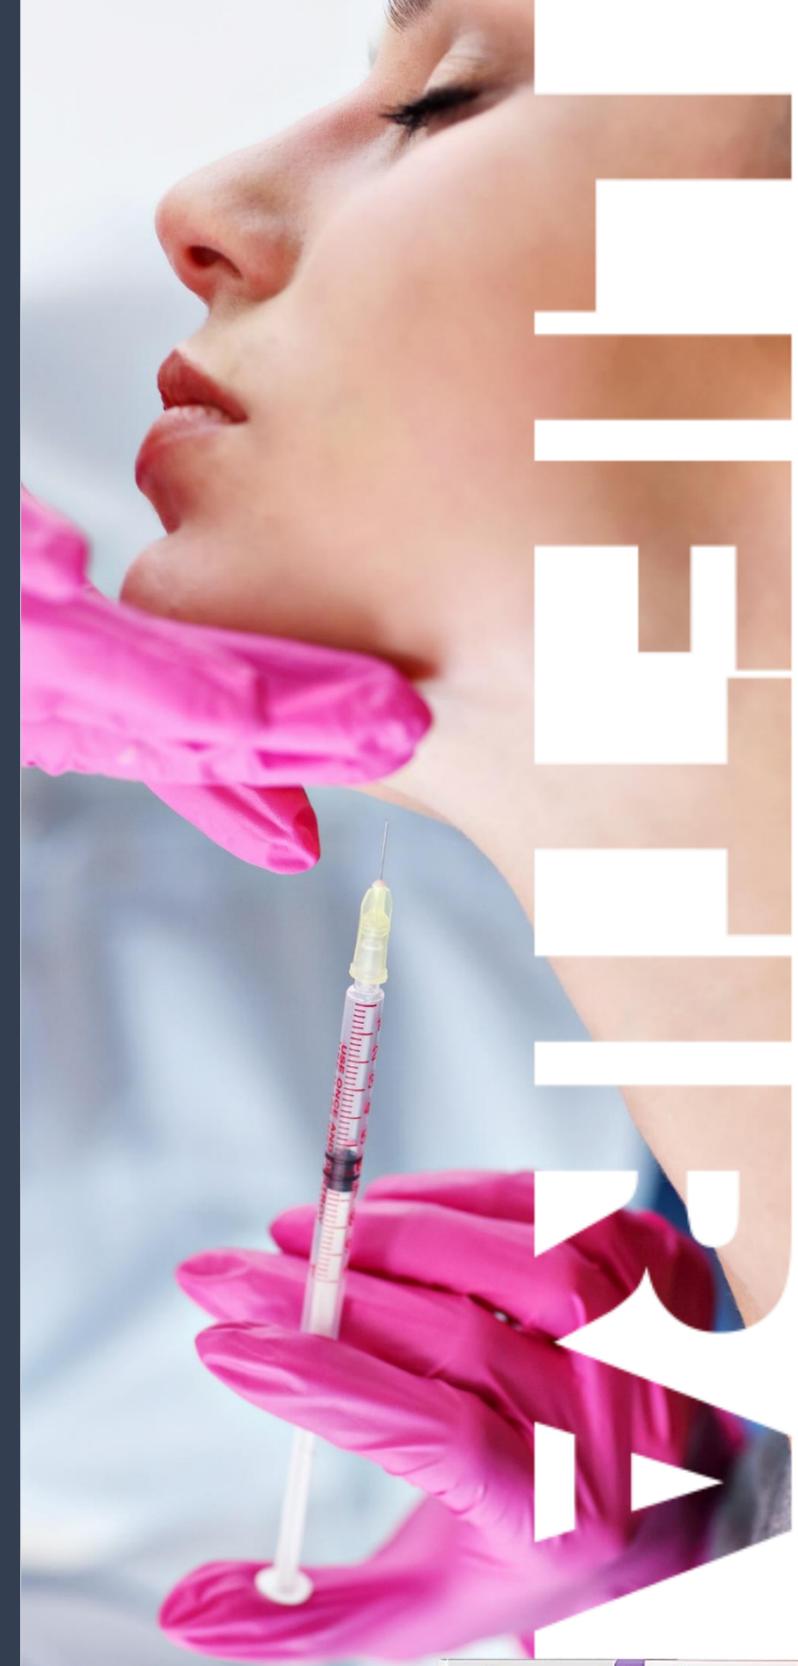

This ingredient contains abundant nutrients such Vitamin A, D3, E, F, Calcium, Potassium, Unsaturated fatty acid, Flavonoid and so on. This shows anti-inflammation, antioxidant, antiviral, antifungal and moisturizing effects, healing and soothing sore parts.

Other Ingredients

Water, Ethanol, Phenoxyethanol, Sodium chloride, Calendula Officinalis Flower Extract, Chamaecyparis obtuse, Asiatic Pennywort Extract, Aronia Berry Extract, Sparassis Extract, Fig Extract

Liftira

Liftira does not reduce only the size of fat cells, which was used in the past. It dissolves and melts fat cells accumulated in the body, and facilitates lymphatic or blood circulation in order to make fats and waste matters eliminated smoothly out of the body by sweats or urines, giving an effect in getting facial and figure lines slim, supple and soft. In addition, it contains abundant nutrients to keep the skin healthy and beautiful for example such as by moisturizing, reinforcing, soothing and immunizing the skin. Especially, it can optionally remove the fats of particular area that cannot be burnt off by taking exercise.

There could occur following symptoms after treatment

1. Excessive treatment can cause diarrhea. But, a problem with the digestive system, for example, a problem with vomiting happens because of the parasympathetic neuroexcitation caused by the fear of injection. It requires getting repetitive shots, and therefore, patients who are reluctant to get shots can feel anemia, essential tremor and fatigue caused by neuroexcitation. Such symptoms, however, stop in one or two days.
2. There could be bruises or swelling for 1-2 weeks after treatment. This symptom can be occurred differently depends on people and area.
3. There could temporarily occur an irregular menstruation. It can facilitate the secretion of estrogen contained in the fat during the process of dissolving fats. Such a development is not in progress constantly but temporarily.
4. It is good to drink water much before and after treatment. The much amount of water is consumed after treatment. Once fat cells begin to swell, the amounts of moisture in blood decline, which can cause dizziness. It is recommended to drink warm water of above 1~2 liters on a daily basis, avoid energetic exercise and take a good rest.
5. Avoid wearing clothes that tightens the treatment area. Too much and long pressure can bring about blistering and pain.

After treatment

- It is recommended to use ice roller for some ten minutes after facial treatment.
- It is recommended to use high frequency for some ten minutes 2days after body treatment.
- Do neither touch the treatment area nor massage and apply a mask pack.
- Avoid taking a sauna, tough exercise and activities to bring much sweat and fever.
- It is good to take a good rest.
- Do not use other medical devices.
- For parts protruding by means of uneven injection, apply PPC cream and make them softly.

Treatment Methods

Use a vial for Face and 1cc of Lidocaine.
Use two vials for Body and a bottle of Lipase(hyaluronidase).

- * Only a single Liftira can be used.
- * It is recommended to use 30-31G of injection.

Face (V-Line) – Inject the corresponding area, keeping 0.5ml at intervals of 1cm. Inject each 5ml of right and left cheeks. The total amount of facial injection must not surpass 10ml.

Tummy/Back – Inject the corresponding areas, keeping 0.7~0.8ml at intervals of 0.5 inch or 1cm (Then, total eight ~ ten vials of PPC must be used according to the level of obesity).

Repeat the treatment over a 3 to 4 times period, at intervals of 3~4 weeks.

The result of treatment shows that the treatment area is reduced to some four to six inches (There is a difference from area or level).

One of its merits is that this provides simple treatment which requires a short treatment time and little pain.

But, instead, it requires much time to dissolve fats. Therefore, it gives an effect to get slim as times pass by rather than giving an effect at once. There begins to occur its effect after two or three weeks as a whole.

※ In case the treatment is necessary in other areas, for example in double chin, armpit, arm, thigh, and so on, the amounts of injection must be adjusted depending on level of obesity of the treatment area (It is required to reduce the amounts of injection in general).

※ For Body Solution is injected in epidermis. This can affect muscles or nerves. In case when it is directly injected in subcutaneous layer, it needs caution. PPC Solution must not be treated below the knee where nerve is concentrated!

※ This ingredient must not be used by pregnant, breast-feeding women and those with diabetes, cancers, heart diseases, strokes or arteriosclerosis, or those having a pea & bean allergy.

The treatment area of Liftira for Face & for Body

- ① Double chin, jawline
- ② Bra line
- ③ Brachialis muscle
- ④ Side area (love handle)
- ⑤ Tummy
- ⑥ Side thigh
- ⑦ Thigh
- ⑧ Calves

※ Whole body that want to reduce fat and anti-cellulite

Liftira

Sterile Slimming Formula for Face

10 ml X 10 vials
Made in Korea

Tremendous Lipolysis

- It forms a soft V-line by dissolving unnecessary fats.

Enhancing the Skin Suppleness

- It forms a resilient skin that looks much younger, by eliminating waste matters in the body.

Excellent V-Line Effect

- It forms a comfortable V-line by facilitating peripheral blood vessels and lymphatic circulation.

L-carnitine

This is a essential nutrient for our body, which helps the physical system function properly.

This is effective in losing weights, burning off fats and producing much energy, which induces sports players to take this ingredient.

An insufficient supply of L-Carnitine in the body gives a trouble in dissolving fat acid, which can lead to obesity. This ingredient is not produced in the body much enough and its function is deteriorated during the aging process. In case when a sufficient amount of this ingredient is not contained, there occurs a problem with fat acid, which makes it hard to lose weights.

Lymphatic circulation gets facilitated at the area where L-Carnitine ingredient is directly injected, therefore eliminating waste matters in the area and downsizing the face. In addition, it can be expected that the skin gets healthy as waste matters are eliminated.

Horse Chestnut Extract

This is effective in subsiding swelling and improving blood flow.

Horse Chestnut contains synthetic stuff called Escin.

Escin resists red blotch and swelling, without inhibiting immunity, giving a tremendous antioxidant effect.

This also contains Saponin, which is helpful for the blood system by making less weak capillary vessels as well as facilitating natural purification.

Other Ingredients

Water, Walnut Extract, Phenoxyethanol, Ethanol, Sodium chloride, Thermus thermophilus, Disodium EDTA
